

Questão #26

PROGRESSO:

26/60

Your company decides to use AWS to host your web application. Two subnets were created in a VPC and an Internet gateway was also attached. In the first subnet, an EC2 instance was created that will host the web application. At the end of the configuration it was verified that the application is accessible through the Internet. The second subnet has an instance that hosts a second application but it is not currently accessible on the Internet. What could be going wrong?

Selecione 2 alternativas

- A** The second subnet does not have a route in the route table to the internet gateway.
- B** The second subnet does not have a route in the route table to the virtual private gateway.
- C** The EC2 instance does not have a public IP address.
- D** The EC2 instance is not attached to an internet gateway.
