Thank you for purchasing this template. I'm happy you liked it. This documentation file includes everything you need to know in order to customize your project and get started.

1. Add your footages and texts

Once you opened the project, go to File -> Import -> File and import your footage in the project. In the left side you see a folder named **Assets**. In "Assets folder" you have the "Stories Compositions folder". Every story has its onw folder. Once you choose the story you want to use open the Story_XX Folder. In that folder you'll see a Story_XX Comp and the "Compositions to edit folder". In that folder you'll see the compositions you have to edit. So to change the footage just open the Footage_XX Composition and drag & drop you fotage to it. To edit the text just open the Texts Composition and by dubble-clicking it you easily modify the texts. **!! NOTE !! - Story_01 & Story_24 have products. So be sure the products you want to use are with transparent background.**

2. Add your logo

Import your logo by clicking File -> Import -> File. After you imported your logo in the project, in the "Assets Folder" you see a folder named "02. Change Your Logo". It that folder you have the "PUT YOUR LOGO HERE COMPOSITION". So all you have to do is to open that composition and just drag and drop your logo.

3. Change the colors

In the "Assets folder" we also have a folder called "03. Stories Composition" which cointains all the stories. Open the folder of the story you want to use and you'll se the composition named with the name of each stories. After you open that story comp you'll se a "Color Control Layer" which allows you easily change all the colors of the scene. **!! NOTE !! - In the "COLOR CONTROL LAYER" you'll see also the logo color controler. If the "Color Cntrol Overlay ON/OFF" is checked you can choose a color to fill your logo with the color "Logo Color" controler otherwise if you want to use your original logo colors simply uncheck the checkbox.**

4. Render the File

Once you have set up your project, open All Stories 1080p Composition and go to "Composition -> Add to Render Queue" set your settings and hit render.

If you have other questions feel free to contact me, I'll do my best to help you
