

Service vs run

Which of the following are true about `docker service create` and `docker container run` ?

Selecione 2 alternativas

A

`docker container run` works with or without swarm mode

B

`docker container run` is inside swarm scope, while `docker service create` is inside standalone scope

C

Both do the same thing. It's all about semantics

D

`docker service create` is inside Swarm scope, while `docker container run` is inside Standalone scope

E

`docker service create` works with or without swarm mode
