This image shows a user interface for a UX check tool. On the left, there's a sidebar with a header 'UX CHECK' and three buttons: 'Pause Selection', 'View Progress', and 'End Evaluation'. Below this are six categories with horizontal progress bars: 'Visibility of system status', 'Match between system and the real world', 'User control and freedom', 'Consistency & standards', 'Visibility of system status', and 'Match between system and the real world'. The second 'Match between system and the real world' category is expanded, showing a detailed view with a dropdown menu for 'Select a heuristic', a severity level of '1', a notes input field, and a 'Save' button. The background is dark, and the overall design is clean and modern.
