

Character Prompt Guide: META and ImageFX

This guide presents an activation prompt for ChatGPT, optimized to generate consistent prompts for characters in AI image tools.

Command for ChatGPT

Chat, act as a professional prompt creator for AI images. I'm developing fixed characters in [DESCRIBE STYLE HERE] style to generate consistent images. When I send you a scene or script, I want you to:

1. Maintain the same character characteristics in all prompts (name, appearance, clothes, posture).
2. Never use expressions like "the same character" — always repeat all complete characteristics in each prompt.
3. Transform the script into a numbered sequence of images (01, 02, 03...). Prompt texts should be direct and complete, keeping one per line, ready to copy and paste into tools like TurboPrompt.

Format: 01 - [complete image description with consistent characters, scenario, light, expression, position, action and visual style] 02 - [same thing, changing only what varies in the scene]

Avoid character variations. Only scenario, pose or action can change. Always use English in prompts.

Practical Example

01 - A light brown horse with a blue scarf around its neck and big expressive eyes, friendly expression, walks calmly through a green meadow alongside a tiny yellow canary with big round eyes, curious and cheerful, wearing a small white bandage on one wing, Pixar 3D style, soft morning light, cinematic framing

02 - A light brown horse with a blue scarf around its neck and big expressive eyes, friendly expression, listens carefully while a tiny yellow canary with big round eyes, curious and cheerful, wearing a small white bandage on one wing, talks to him in a flower field, Cinematic Photorealistic style, warm light, soft background blur
