10. Separators

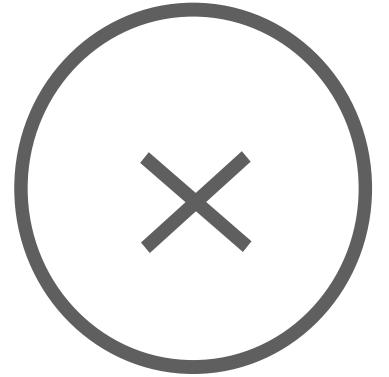

Em que casos utilizar.

Devemos sempre analisar o projeto e a complexidade para entender se cabe ou não criar um design system.

É válido para:

- Sites e aplicativos grandes que necessitem de recorrente manutenção;
- Projetos que envolvem equipes grandes;
- Normalmente utilizado em design de produto.

Não é válido para:

- Projetos pequenos que não necessitam de manutenção recorrente;
- Entregas que devem ser rápidas e pontuais;
- Projetos que serão “descartados”.
